

Izan López Seco

SITE RELIABILITY ENGINEER – REMOTE ACROSS EUROPE

Nine years shipping software. Whatever language, whatever cloud — hand me the service nobody wants to own and I'll make it boring again.

THE ROUTE	2024– Site Reliability Engineer · UST Senior engineer in a team of six, keeping services on AWS running. I carry the pager, mentor the people who join, and made our releases faster and less likely to break.
	2022–24 Cloud Engineer · Intelygenz Built BBVA's authorization platform with a team that owned every step — design, code, testing, deployment and security. Java and Python on AWS, shipped continuously.
	2020–22 Software Engineer · atSistemas Stress-tested Inditex's platforms until they fell over, then helped make them hold. Before that, an incident-management system for Mutua Madrileña.
	2017–20 Full-stack developer Everis, Atmira, CINTe Iberia and Alvantia. Banking and insurance work, front and back — where I learned what breaks in production.
THE CRAFT	Java · Python · TypeScript · Groovy · Bash Any of those, in production, tomorrow. AWS, Kubernetes and Docker day to day; Grafana and OpenSearch to see what's happening; load and chaos testing to find out before the users do. AWS · Kubernetes · Docker · Terraform · Jenkins · GitHub Actions · CI/CD · Java · Spring · Python · TypeScript · Bash · Kafka · gRPC · MongoDB · SQL · Grafana · OpenSearch · Linux · SRE · DevOps · observability · incident response · microservices Spanish, native · English, professional
